DESCRIPTION

The Pulse Fitness Rig 016 is a versatile multi-bay functional training rig designed for facilities seeking to maximise training capacity and exercise variety. Engineered for strength, conditioning, and functional movement training, it incorporates multiple workout stations that support bodyweight, suspension, and resistance-based exercises. Its durable construction and efficient layout make it an ideal solution for commercial gyms, functional fitness areas, and performance training spaces looking to accommodate multiple users at once.

Constructed from heavy-gauge steel section, and built to endure the most vigorous of workouts. The free-standing, single or dual-sided Functional Training Rig is the most versatile, modular, piece of commercial fitness equipment available. Designed to support a wide range of workouts and accessory storage, all within one highly customisable, space-efficient solution.

The 960i can be configured (and re-configured if necessary) to fit into extremely specific spaces, and therefore can accommodate the needs of both athletes and gym-goers training needs.
